

A Use the word given in capitals to form a word that fits in the space.

Life in extreme conditions

Until relatively recently, it was thought that extreme heat and cold presented (1) (MOUNT) problems to living organisms and that all life existed in a narrow range of (2) (FAVOUR) temperatures. However, the discovery of extremophiles has forced a (3) (ASSESS) of that view.

Extremophiles are bacteria that survive, and even thrive, in (4) (SEEM) impossible conditions. (5) (PROBABLE) as it may seem, some exist at temperatures exceeding 80°C in geysers and hot springs, while others live in the freezing conditions of the Antarctic (6) (WILD). While most species of larger animals are (7) (THREAT) by global warming, even to the point of (8) (EXTINCT), that kind of (9) (ECOLOGY) change may actually benefit the extremophiles. These (10) (MYSTERY) organisms may survive long after the human race.
